Summary

Software Engineer and Flutter Developer focused on building mobile applications, API integrations, and automation workflows. Experienced in Flutter, GetX, Clean Architecture, Laravel, bloc, Firebase, JWT authentication, and n8n automation. Built real-world projects involving university services, loyalty systems, AI-assisted workflows, real-time tracking, and customer support automation.

Experience

Lumi Coin — Syria

Flutter Developer & Product Contributor — Sep 2025 - Present

- Contributed to product planning and feature decisions for a B2B loyalty platform built for the Syrian market.
- Developed the Flutter mobile app using GetX and Clean Architecture principles.
- Built vendor-facing features that allow businesses to manage menus, offers, and reward-related data.
- Implemented a partner directory for browsing merchant profiles, service catalogs, and business details.
- Configured CI/CD workflows to support automated builds and release updates; helped launch the app on Google Play with 500 users.

Focal X Agency — Remote

Flutter Developer Trainee — 2023 - 2024

- Completed an intensive hands-on training program focusing on advanced mobile app development.
- Built and deployed real-world projects applying **MVVM** patterns and best practices in state management.
- Collaborated with senior developers to conduct code reviews and performance optimization.

Self-Employed — Remote

Freelance Software Engineer — 2024 - present

- Developing custom full-stack solutions using Flutter and Laravel.
- Building automated workflows using **n8n** to streamline business operations and customer support.

Projects

Khadmati – Full-Stack University Services Platform — Feb 2026 – present

- Role: Full-Stack Engineer.
- Tech: Flutter, React/Vite, Django REST Framework, PostgreSQL, JWT.
- Description: A centralized campus operations platform featuring role-based workflows for students, housing staff, admins, and managers.
- Key Features: Engineered end-to-end modules for housing assignments, maintenance tracking, complaint routing, transport, and wallet/finance operations.
- Infrastructure: Configured robust REST APIs, CORS/ngrok for isolated development environments, and secure cross-platform connectivity between mobile and web clients

UniVerse — Nov 2025 - jan 2026

- **Engineered a scalable mobile application** using **Flutter** and **GetX**, strictly following **Clean Architecture** principles to separate Presentation, Domain, and Data layers.
- **Developed a Hybrid AI System** using **n8n** workflows and **Google Gemini API** to generate personalized academic schedules based on complex logic (GPA, Prerequisites) and handle natural language negotiation with students.
- **Implemented Real-Time Tracking** features for university buses using **WebSockets (Socket.IO)** and **OpenStreetMap**, allowing live location streaming between drivers and students.
- **Integrated Firebase Cloud Messaging (FCM)** for push notifications and managed secure authentication flows using JWT with a **NestJS** backend.

UniVerse UI

Expen Scope (EXS) Jun 2025 - Aug 2025

- Designed and developed a dual-personality financial assistant for businesses and individuals using an **Agile** development approach.
- Built a full-stack system with a **Flutter** frontend, **Laravel** backend, and configured **CI/CD** pipelines for rapid, bug-free deployments.
- Implemented AI-driven workflows using **n8n** integrated with **Google Gemini API**.

EXS

Smart University Campus App Jan 2026 – Feb 2026

- **Role:** Lead Mobile Engineer.
- **Tech:** Flutter, GetX, Clean Arch, **RAG AI**, Django API.
- **Description:** An API-first super-app digitizing the university experience (Housing, Transport, Finance).
- **AI Innovation: Enhanced student experience by integrating a RAG AI Chatbot (n8n and Gemini), automating real-time responses for housing and financial queries, reducing manual coordination efforts.**
- **Features & DevOps: Implemented secure JWT auth with Dio Interceptors, a real-time financial ledger, and configured CI/CD pipelines for automated testing and delivery.**

Smart Telegram Support Bot (Automation Project) Feb 2026 – Feb 2026

- **Role:** Automation Engineer.
- **Description:** Engineered an intelligent customer support bot on Telegram.
- **Features:** Handles user queries with animated responses and automatically logs complaints/feedback into **Google Sheets** for the admin team using **n8n** workflows.
- **Tech:** n8n, Telegram API, Google Sheets API, JSON.

Secure Public Sector Platform (Laravel Project) Jan 2026 – Feb 2026

- **Role:** Backend Developer (Laravel 11).
- **Description:** Developed a high-security web platform for a government entity to manage legal/consultancy services.
- **Key Tech:** Laravel, Cloudflare Turnstile, Honeypot, Security Headers, Brevo API.
- **Impact:** Ensured full data protection and implemented a multi-language (RTL/LTR) interface for seamless accessibility.

Volunteering

Aga Khan Foundation Nov 2025 - Present
Syria

- Managed and organized critical administrative datasets using Microsoft Excel and Word.
- Streamlined data entry processes, ensuring high accuracy and efficiency in documentation.
- Supported the operations team in daily logistical and administrative tasks.

Skills

Mobile Development:
Flutter, Dart, GetX, Clean Architecture, MVVM, REST API Integration, Firebase, FCM

Automation & AI Integration:
n8n, Node.js, WhatsApp Automation, Telegram API, Google Gemini API, Webhooks, Google Sheets API

Tools:
Git, GitHub, Postman, Docker, Swagger, Android Studio, VS Code

Backend & APIs:
Django REST Framework, Laravel, JWT Authentication, PostgreSQL, MySQL, WebSockets

Education

Yarmouk Private University Software Engineering
2020 - 2026

Languages

Arabic
Native
